AREAWAYS

It is possible that underground vaults or areaways under sidewalks will be encountered during construction of the ADA Curb Ramps. Where records or physical appearance indicate that there possibly could be an areaway, it is shown on the plans. There may be cases where areaways are encountered for which there was no record available. Even the presence of an areaway does not necessarily preclude the construction of the Curb Ramps according to the plans.

Should it be found that the elevation of the roof interferes with the construction details provided on the plans an attempt to relocate the ramp should first be made to avoid interference. If that is not possible there are typical details for re-construction and informational quantities shown on Sheet Number 4A.
