Subject:
 Public Highway Institutional Control Notification
 East Seven Mile Road Right-of-Way
 Adjacent Former Amoco Service Station No. 5882
 800 East Seven Mile Road, Detroit, Michigan
 Facility ID No.: 00005656
 PHIC-RRD-213-18-004

ENVIRONMENT

Dear Mr. Max:

On behalf of Atlantic Richfield Company, an affiliate of BP Products North America, Inc. (BP), Arcadis of Michigan, LLC (Arcadis) has been conducting environmental assessment, monitoring, and remediation measures at Former Amoco Service Station No. 5882 at 800 East Seven Mile Road in Detroit, Wayne County, Michigan (Site; **Figure 1**). This work has been completed in accordance with the rules and regulations of Part 213 of the Natural Resources and Environmental Protection Act, 1995 PA 451, as amended (the Act). This notification is being presented as a result of Michigan Department of Environmental Quality (MDEQ) Confirmed Releases C-0780-85 and C-0265-99, which were filed on January 1, 1990 and September 13, 1993, respectively.

To achieve environmental regulatory closure at the Site and pursuant to Section 21310a of the Act, Arcadis is submitting the required information and supporting documentation regarding impacts remaining within the city-maintained roadway of East Seven Mile Road, located north of the Site (**Figure 2**).

This notification serves as an institutional control for reliance on the existence of a City of Detroit public highway. This institutional control is based on the unaltered use of East Seven Mile Road and its associated right-of-way (ROW) as a public highway for the foreseeable future.

Date:
 April 19, 2018

Summary of Required Information for Submittal

Consistent with Section 21310a(3)(c)(i) of the Act, the following information is provided:

A – Provide Site name, address, and facility identification number, and the name and contact information of the person relying on the alternative mechanism.

- Site: Former Amoco Service Station No. 5882, 800 East Seven Mile Road, Detroit, Michigan
- Facility Identification Number: 00005656
- Contact Information:
 - Consultant: Megan Meckley; Arcadis of Michigan, LLC; 28550 Cabot Drive, Suite 500, Novi, Michigan 48377; Phone – 301.304.8347; email – Megan.Meckley@arcadis.com
 - BP Products North America, Inc.: Randy Coil, Contracts Manager; Atlantic Richfield Company; 201 Helios Way, Helios Plaza 6.370A, Houston, Texas 77079; Phone – 281.366.0716; Email – coilrd@bp.com

B – Identification of the MDEQ Department District Office with jurisdiction over the Site.

- Southeast Michigan District Office; Remediation and Redevelopment Division; 27700 Donald Court, Warren, Michigan 48092; Phone: 586.753.3700

C – The name of the affected public highway and the nearest intersection.

- Soil and groundwater impacts remain beneath East Seven Mile Road, located north of the Site.
- The nearest intersection is East Seven Mile Road and I-75 Service Drive, east of the Site. Omira Street is also an adjacent street to the northwest that dead-ends at the Site.

D – Identification of known or suspected contaminants.

- Contaminants present are associated with gasoline releases under MDEQ Release Numbers C-0780-85 and C-0265-99.

E – A statement that residual or mobile non-aqueous phase liquid (NAPL) is or is not present at the affected public highway.

- Residual NAPL is assumed to be present within the southern ROW of East Seven Mile Road (**Figure 3**), based on the proximity of residual NAPL observed on the Site. Mobile NAPL is not present within East Seven Mile Road or on the Site.

F – The media affected, including depth of contaminated soil, depth of groundwater, and predominant groundwater flow direction.

- Impacted soil is encountered at approximately 1 to 9 feet below ground surface (bgs) (**Figure 3**).
- Contaminated groundwater on the Site is encountered at approximately 1 to 8 feet bgs (**Figure 4**).
- The predominant groundwater flow direction is indiscernible (**Figure 5**) due to groundwater being perched above a significant clay layer. The groundwater is not in an aquifer.

G – A scale drawing of the portion of public highway subject to the alternate mechanism that depicts the area impacted by regulated substances and the location of utilities in the impacted area, including storm water systems and municipal separate storm sewer systems.

- Please refer to **Figures 6A and 6B**, which depict the horizontal and vertical extent of impacted areas within the ROW of East Seven Mile Road with detected concentrations exceeding MDEQ Risk-Based Screening Levels (RBSLs). **Figure 3** and **Figure 6B** also show the approximate extent of residual NAPL within the southern ROW of East Seven Mile Road and utility locations and depths within the roadway.

H – Identification of all ownership and possessory or use property interests related to the public highway and whether they are affected by the contamination and whether they have received notification of the existing conditions as part of a corrective action plan or pursuant to the due care requirements under Section 21304c of the Act.

- All notices have been submitted to parties of interest related to the public highway as required under Part 213 – Notice to Impacted Parties (NIP).
- On September 27, 2005, the City of Detroit received an NIP (**Attachment 1**) notifying the City of existing conditions.

I – Identification of exposure risks from drinking water, direct contact, groundwater, soil excavation, or relocation.

- Soil and Groundwater Risks:
 - Soil and groundwater impacts have been identified within and/or adjacent to the southern ROW of East Seven Mile Road. **Figures 3 and 4** depict the area of roadway containing impacted soil and/or groundwater. Soil impacts are present at depths ranging from approximately 1 to 9 feet bgs, and groundwater impacts are present within monitoring wells at approximately 1 to 8 feet bgs. Soil impacted with constituent concentrations exceeding MDEQ Drinking Water Protection RBSLs, Groundwater Surface Water Interface (GSI) Protection RBSLs, and Soil Vapor Intrusion Recommended Interim Action Screening Levels (RIASLs) are present within the southern ROW of East Seven Mile Road (**Figure 3** and **Table 1**). Residual NAPL is assumed to be present within the southern ROW of East Seven Mile Road based on the proximity of residual NAPL on the Site, as depicted on **Figure 3**. Additionally, groundwater impacted with constituent concentrations exceeding MDEQ Drinking Water and GSI RSBLs are present on the Site, immediately adjacent to the southern ROW of East Seven Mile Road (**Figure 4** and **Table 2**). Cross sectional diagrams depicting soil and groundwater impact distribution are provided on **Figures 6A and 6B**.
- Groundwater Management:
 - Management and disposal of groundwater for short-term dewatering for construction purposes should be conducted in accordance with applicable local, state, and federal laws and regulations and in a manner that does not cause or result in a new release, exacerbation of existing contamination, or any other violation of local, state, and federal environmental laws and regulations.

- Soil Management:
 - Management of contaminated soils, media, and/or debris located in the road ROW shall be in accordance with the applicable requirements of Section 20120c or Section 21304b of the Act; Part 111, Hazardous Waste Management, of the Act; Subtitle C of the Resource Conservation and Recovery Act, 42 U.S.C. Section 6901 et seq.; the administrative rules promulgated thereunder; and all other relevant state and federal laws.

I (ii) – Confirm that there are no current plans to relocate, vacate, or abandon the public right of way.

- If the City of Detroit plans to perform work within East Seven Mile Road or its associated ROW, based on review of the 5-Year Plan, the City of Detroit is requested to contact Arcadis personnel using the contact information outlined in Item A above for further discussion.

I (iii) – Provide information that as a result of the release contamination does not enter a storm sewer system or clearly identify the nature and extent of the contamination that enters or has the potential to enter the storm sewer.

- The combined sewer in East Seven Mile Road is backfilled with clay and is located approximately 26.5 feet bgs. Impacted groundwater is encountered between 1 and 8 feet bgs at a significantly higher elevation than the sewer line. Therefore, migration of impacted groundwater into or along utilities is not occurring and is not considered a risk.

Arcadis is submitting the required information and supporting documentation regarding impacts remaining within the city-owned ROW of East Seven Mile Road, located north of the Site, pursuant to Section 21310a(3)(c) of the Act.

If you have any questions or concerns, please contact me at 301.304.8347 or at Megan.Meckley@arcadis.com or Gustan Taylor at 248.994.2294 or Gustan.Taylor@arcadis.com.

Sincerely,

Arcadis of Michigan, LLC

Megan Meckley
Task Manager

See Notes on last page.

Notes:

-- - Not applicable
< - Constituent was not detected; concentration is listed as less than the reporting limit.
Soil samples were analyzed using United States Environmental Protection Agency (USEPA) Method 8260B SW846 and the Wisconsin GRO method.
CND - Criteria not developed
DUP - Duplicate sample
DWP - Exceeds Residential Drinking Water Protection RBSLs
ft bgs - feet below ground surface
GRO - Gasoline Range Organics
GSIP - Exceeds Groundwater Surface Water Interface Protection RBSLs
ID - Insufficient data to develop criterion
J - Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
LNAPL - Light Non-Aqueous Phase Liquid
NA - Not analyzed
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
RBSL - Risk-based screening level
RIASL - Recommended Interim Action Screening Levels, Michigan Department of Environmental Quality (MDEQ) August 2017
µg/kg - Micrograms per kilogram. All results shown in µg/kg, with the exception of GRO, lead, cadmium, and chromium, which are shown in milligrams per kilogram (mg/kg).
VIA - Exceeds Non-Residential Soil Volatilization to Indoor Air Interim Action Screening Levels
(C) The criterion developed under R 299.20 to R299.26 exceeds the chemical-specific soil saturation screening level (Csat). The person proposing
(D) Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).
(DD) Hazardous substance causes developmental effects. Residential direct contact criteria are protective of both prenatal and postnatal exposure.
(G) Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving water.
(M) Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.
(X) The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source.
(W) Concentrations of trihalomethanes in soil shall be added together to determine compliance with the drinking water protection criterion of 1,600 µg/kg.

Notes:

All concentrations are listed in micrograms per liter ($\mu\text{g/L}$).

-- denotes not analyzed

< denotes constituent is not detected at indicated laboratory detection limit

Bold value denotes exceedance of one or more of the Michigan Department of Environmental Quality (MDEQ) Part 213 Tier 1 Residential RBSLs

Shaded entries denote off-site locations

Groundwater samples were analyzed using United States Environmental Protection Agency (USEPA) Method 8260B SW846.

Abbreviations:

CND - Criteria not developed

DUP - Duplicate Sample

DW - Exceeds Residential Drinking Water RBSLs

GSI - Exceeds Groundwater Surface Water Interface RBSLs

ID - Insufficient data to develop criterion

J - Estimated Value

NA - Not applicable

ND - Not Detected; Undetected constituents were labeled as 'ND' rather than '<x>' prior to Arcadis' acquisition of the site in 2009.

RBSLs - Risk Based Screening Levels.

RIASLs - Recommended Interim Action Screening Levels (MDEQ, August 2017)

VIA - Exceeds Residential Groundwater Volatilization to Indoor Air RIASLs

(E) - Criterion is the aesthetic drinking water value, as required by Section 20120a(5) of the Natural Resources Environmental Protection Act (NREPA).

(A) - Criterion is the state of Michigan drinking water standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005.

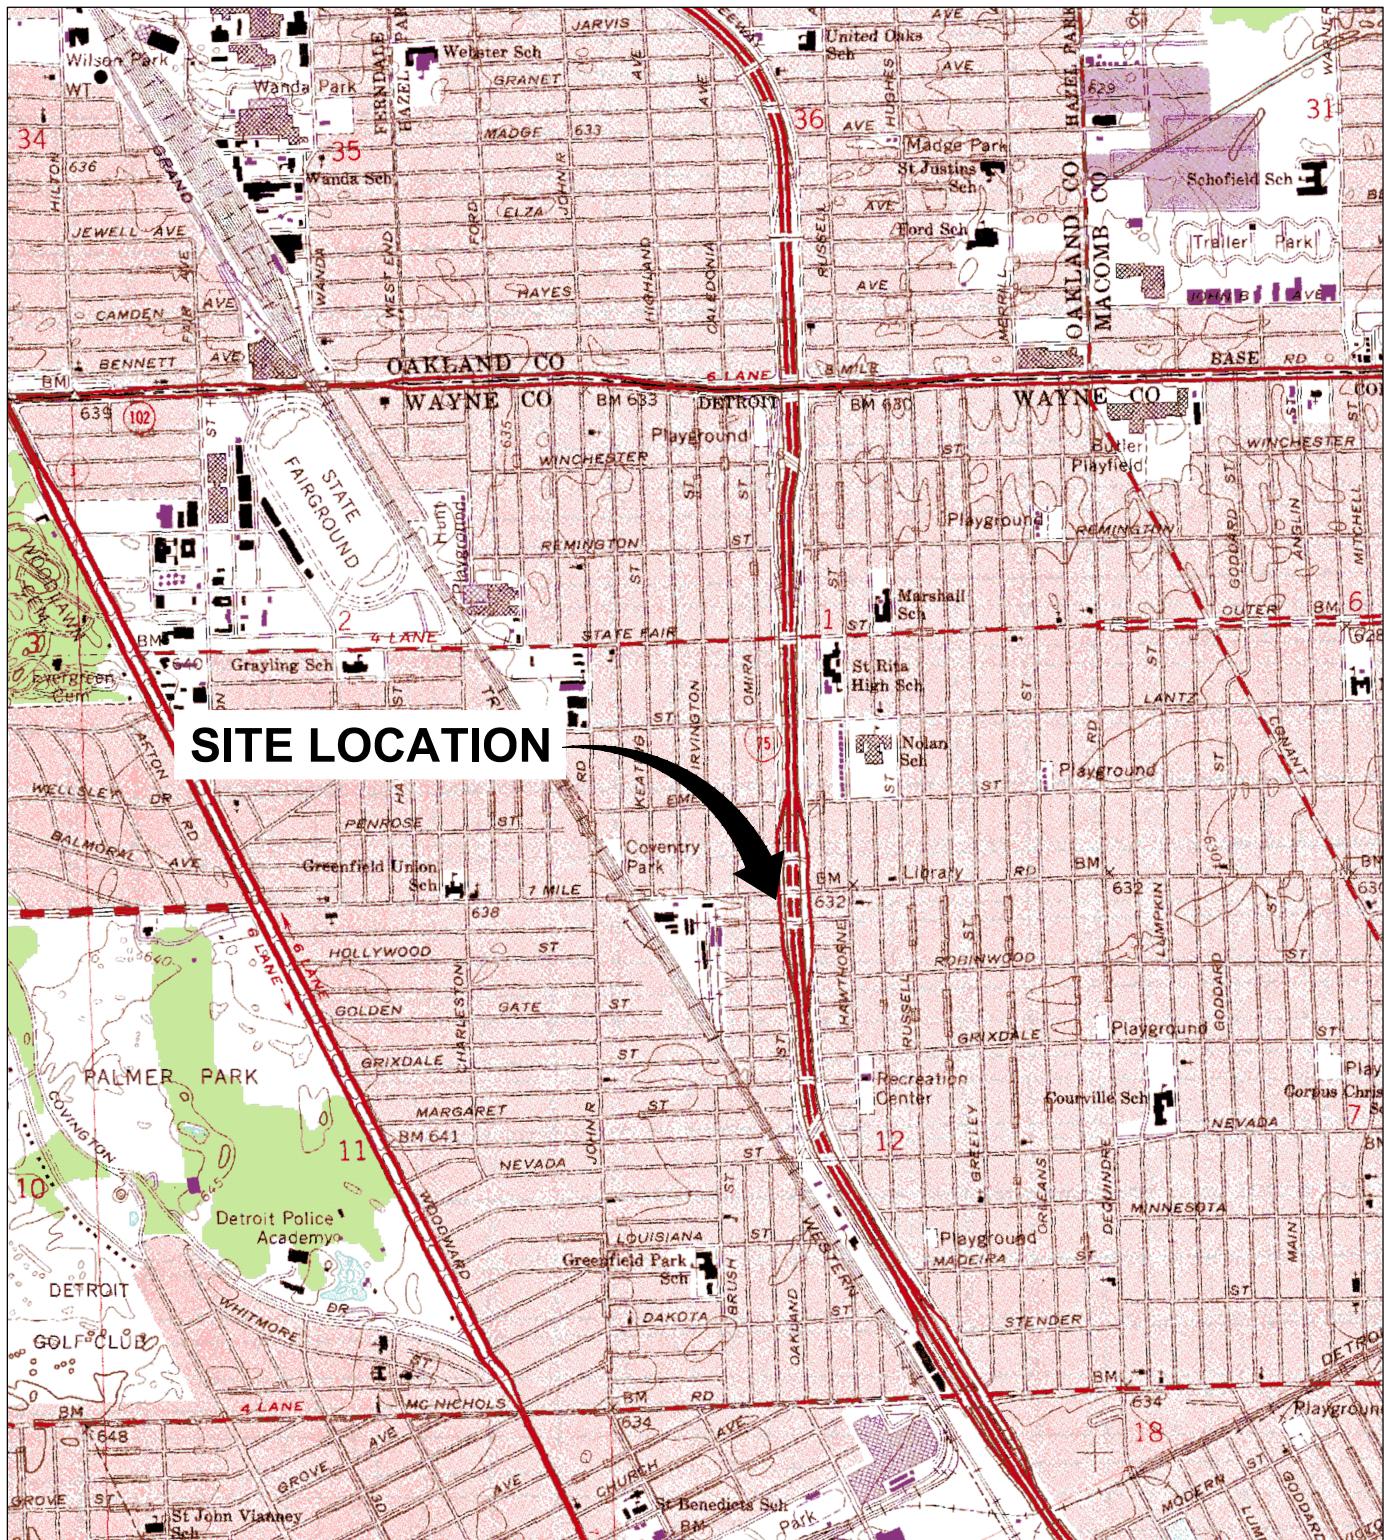

(G) - Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving water.

(L) - Criteria for lead are derived using a biologically based model, as allowed for under Section 20120a(9) of the NREPA, and are not calculated using the algorithms and assumptions specified in pathway-specific rules.

(X) - The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source.

Notice to Impacted Parties

NOTICE TO IMPACTED PARTIES OF CORRECTIVE ACTION

This information is required under Sections 21309a(3) of Part 213, Leaking Underground Storage Tanks (LUST), of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended. Failure to comply with the provisions of this Act may result in civil fines not to exceed \$10,000 for each day the violation continues or failure to comply continues.

Instructions: (1) Use this form to notice owners of property whose soil or groundwater exceed Tier 1 unrestricted residential Risk-Based Screening Levels when the corrective action plan indicates that this level of contamination exists on property owned or operated by another person. Owners of property include, but are not limited to, easement holders, tenants, utilities, and highway authorities. (2) Send the notice to the impacted parties described above before submitting the corrective action plan to the Remediation & Redevelopment Division (RRD). Record that notification was made on the appropriate report cover sheets (Final Assessment Report, EQP 3842 and Closure Report, EQP 3843). (3) The RRD may request a copy and/or proof of providing this notice as part of an audit. This notice does not constitute a warranty or representation of any kind by the State of Michigan that the corrective actions performed in accordance with this notice will result in the achievement of the remedial criteria established by Law, or that the property is suitable for any particular use.

Owner or Operator: Atlantic Richfield Company an affiliate of BP Products North America Inc.

Site Name: Amoco Service Station No. 5882

Site Address: 800 East Seven Mile Road City: Detroit State: MI Zip: 48203

Contact Person: Kevin J. Endriss Phone Number: 419-842-1553

Mailing Address: P.O. Box 352917 City: Toledo State: OH Zip: 43635-2917

Qualified Underground Storage Tank Consultant: Delta Environmental Consultants Inc.

Address: 39810 Grand River Avenue, Suite C-100 City: Novi State: MI Zip: 48375

Contact Person: Kristine L. Romanik Phone Number: 248-699-0252

A corrective action plan for the above site has been developed as a result of a release from an underground storage tank. The corrective action plan indicates:

- The groundwater at the property listed below is contaminated.
- The soils at the property listed below are contaminated.

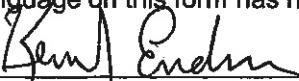

Property(ies) directly impacted by the release include(s):

Address: Southern ROW of Seven Mile Road, western ROW of I-75 Service Drive adjacent to subject site, and adjacent alleyway south of the subject site City: Detroit State: MI Zip: 48203

Property Name: Southern ROW of Seven Mile Road, western ROW of I-75 Service Drive adjacent to subject site, and adjacent alleyway south of the subject site

or See attached list.

I hereby attest to the accuracy of the statements in this document and all attachments. I further certify that the language on this form has not been modified.

Owner or Operator's Signature

Date

To obtain a copy of the corrective action plan, contact the owner/operator listed above or the Remediation & Redevelopment Division District Office located at
Detroit Office, Cadillac Place, 3058 W. Grand Blvd., Suite 2-300, Detroit, MI 48207

Re: Notice to Impacted Parties of Corrective Action

Amoco Service Station No. 5882, 800 East Seven Mile Road, Detroit, Michigan 48203
Facility ID Number: 0-0005656

Dear Mr. Farhat:

Delta Environmental Consultants, Inc. (Delta), on behalf of Atlantic Richfield Company (ARC) an affiliate of BP Products North America, Inc. (BP), would like to provide you with an update on the progress of corrective actions at the Amoco Service Station No. 5882 site located at 800 East Seven Mile Road, Detroit, Michigan. Groundwater and soil data that has been collected from monitoring points associated with the subject property has necessitated the need for the following notice.

In accordance with *Section 21309a(3) of Part 213, Leaking Underground Storage Tanks (LUST) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, (Act 451)* Delta submits this Notice to Impacted Parties of Corrective Action (please see attachment) for the property located at 800 East Seven Mile Road, Detroit, MI 48203, in the southern right-of-way (ROW) of Seven Mile Road, western ROW of I-75 Service drive adjacent to the subject site, and the adjacent alleyway south of subject site. This notice is a result of ongoing corrective action activities (such as, but not limited to, groundwater monitoring, soil probing, well installation, etc.) that are occurring at the facility located at East Seven Mile Road, Detroit, Michigan, and is required by the Michigan Department of Environmental Quality – Remediation and Redevelopment Division (MDEQ-RRD).

Soil and groundwater concentrations above Tier 1 Residential Risk-Based Screening levels (RBSLs) have been observed in monitoring points associated with the subject property. This notice is being provided to be protective of human health in the event that the groundwater is being used for objective purposes. ARC is continuing with corrective action activities until environmental closure at the Amoco Service Station No. 5882 site and associated impacted properties has been achieved.
