Notes:

◉ Indicates Test Hole for Soil Profile

Heavy Lines & Shaded areas denotes new Bridge construction

The work covered by these plans includes removing portions of structures, construction of the proposed bridge and placing slope paving to the limits shown. All other work is included in the Road Plans which are a part of this contract. Topography shown hereon represents conditions existing at the time the field survey was made. However, these conditions may have been materially altered by the operations of others prior to this contract.

The information concerning train movement and the speed thereof does not represent a commitment by the Conrail railroad to continue them unchanged inasmuch as they are subject to change without notice.

Approximately 100 per cent of the cost of this structure represents a hazard to railroad operations.

RAILROAD TRAFFIC

CONRAIL EXPECTS APPROX. 1 FREIGHT MOVEMENT PER DAY AT A MAXIMUM SPEED OF 2 M.P.H. THIS DOES NOT REPRESENT A COMMITMENT ON THE PART OF CONRAIL TO CONTINUE MOVEMENTS UNCHANGED INASMUCH AS THE ARE SUBJECT TO CHANGE WITHOUT NOTICE.

GENERAL NOTES:

The design of this structure is based on current AASHTO Standard Specifications for Highway Bridges (H 25-44 loading) and the M.D.S.H. Specifications for the Design of Highway Bridges - 1958 Edition. Live load plus impact deflection = 1/800 of span length and 1/300 of cantilever arm.

"Slope Paving, Precast Concrete" may be used in lieu of "Slope Paving, Concrete" at the Contractors option. For details see Standard Drawing SP2.

Structural Light Weight Conc. will be used to encase the 12-4" ϕ PVC ducts (P.L.D.)

Tamped Clay and Selected Excavated Material are incidental to Unclassified Foundation Excavation.

Structure Embankment limits shall extend to 5' outside the toe at all abutment and wingwall footings and slope down on a 1 on 1.5 slope to existing ground. All other fill under slope paving shall be Structure Backfill.

Trackwork, 8' Access road, and surface drainage ditch by Consolidated Rail Corp.

Except where otherwise indicated on these plans or in the Proposal and Supplemental Specifications contained herein, all materials and workmanship shall be in accordance with the Michigan Dept. of State Highways and Transportation Standard Specifications for Construction 1979 Edition.

Prior to any excavating, Mr. L. Rizzo of Detroit Edison (237-9513) shall be contacted. The exact location of the 48" conduit in Lafayette Street shall be confirmed by hand digging.

Detroit Edison Co.	M.H. E			

NOTES:
The contractor shall locate all active underground utilities prior to starting work, and shall conduct his operations in such a manner as to insure that those utilities not requiring relocation will not be disturbed.
For protection of underground utilities, the contractor shall dial 800-482-7171 a minimum of 48 hours prior to excavating in the vicinity of utility lines. All "Miss Dig" participating members will thus be routinely notified. This does not relieve the contractor of the responsibility of notifying utility owners who may not be a part of the "Miss Dig" alert system.

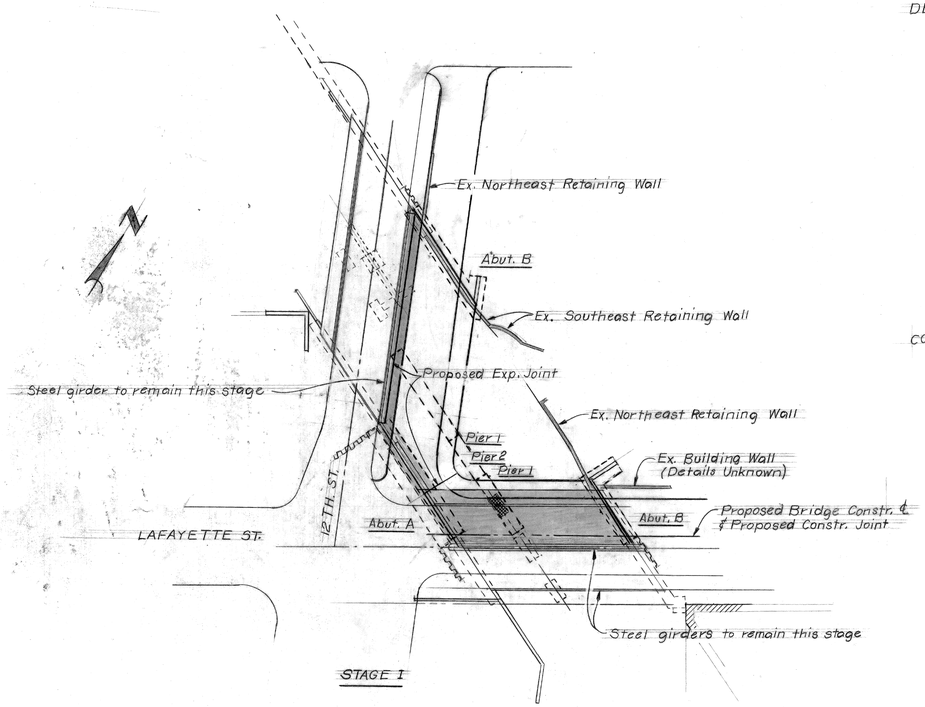
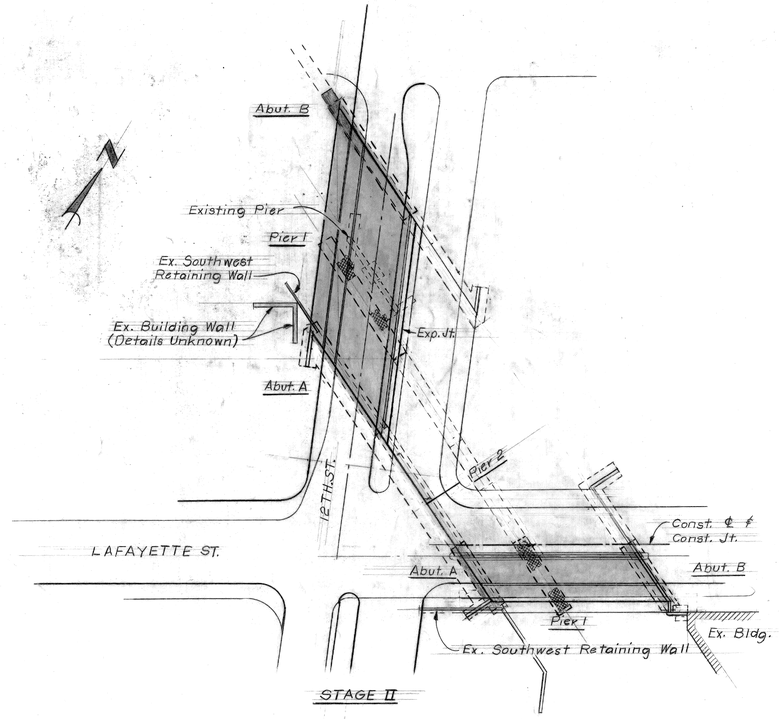
EXISTING UTILITIES AND PROPOSED ALTERATIONS

SHEET ___ OF ___ SHEETS
CONTRACT NO. 07110A
DRWG No. S107
DATE NOV 1979

R. CARROLL, INC. 378 1818





DEMOLITION- STAGE I

DEMOLITION OF THE NORTH PORTION OF THE LAFAYETTE BRIDGE SHALL NOT COMMENCE UNTIL THE EXISTING PUD COMM. CABLES ARE TEMP RELOCATED IN THE SOUTH PORTION OF THE BRIDGE (SEE ELECT. DRWGS). TIME EST. IS ABT. 2 MONTHS.

Remove the east walk from existing 12th street bridge.
Remove the north half of Lafayette St. bridge.

Remove the existing stone and concrete abutments and walls, shown shaded on 12th and Lafayette St. to 2 ft. min. below the proposed footing elevations.

Remove the Northeast retaining wall on 12th St. to 3 ft. below Plan Grade.

Remove the Southeast retaining wall on 12th St. to 3 ft. below finished Grade

Remove the Northeast retaining wall and building wall on Lafayette to 2 ft. below proposed footing elevation or 3 ft. below plan finished grade.

Remove the North half of the center pier on Lafayette St. including the northern most footing shown crosshatched. That portion of the pier necessary for support of the center girder shall remain intact.

CONSTRUCTION- STAGE I

RAILROAD TO COMPLETE TRACK WORK.

Construct the east portion of Abutment B and wingwall on 12th St. and the north portion of Abutment B and wingwall on Lafayette St.

Construct the east portion of Pier 1 on 12th St. and the north portion of Pier 1 on Lafayette St. Pier 1 on Lafayette St. will be built over and around the existing D.E. 120 K.V. line in tunnel approximately 26 ft N of the Bridge Constr. ℄.

Construct Pier 2

Construct the east portion of Abutment A on 12th St. and the adjoining north portion of Abutment A on Lafayette St.

Set the steel beams for both east portion 12th and north portion Lafayette St.

M.B.T. Co. to relocate their ducts from existing 12th St. bridge to new 12th St. bridge. Approximate time required to splice cables is 2 months.

Complete the bridge superstructure for both the east portion of 12th and the north portion of Lafayette Streets.

Drive Temporary Sheet Piling @ 4 locations. See Abutment Drawings for limits. Locate all active utilities prior to driving any sheeting.

DEMOLITION- STAGE II

After all utilities have been removed from the remaining portions of the existing bridges demolition can commence.

Remove the remaining superstructures from 12th and Lafayette Street bridges.

Remove the remaining stone and concrete abutments and walls, shown shaded, on 12th and Lafayette streets to 2 ft. min. below the proposed footing elevations or 3 ft. below plan finished grade.

Remove the pier bent and concrete base wall on 12th Street to the top of the existing steel grade beams. Remove the existing footings and that portion of the grade beams within the new footing outline, shown crosshatched, to elevation 96.5.

Remove the pier bent and concrete base wall and footings on Lafayette Street shown crosshatched.

THE WESTERLY PORTIONS OF THE FOUNDATIONS FOR THE PIER AND THE SOUTH ABUTMENT IN 12TH ST. SHALL NOT BE REMOVED OR DISTURBED UNTIL THE NEW 5'℄ ENCASED SEWER IS PLACED INTO SERVICE.

CONSTRUCTION- STAGE II

Construct the west portion of Abutments A and B and wing walls for 12th Street and the south portions of Abutments A and B and wingwalls for Lafayette St.

Construct the west portion of Pier 1 on 12th street.

BUILD THE 5'℄ ENCASED SEWER IN 12TH ST.

Construct the south portion of Pier 1 on Lafayette street.

Erect the remaining structural steel and complete the bridge superstructure for both 12th and Lafayette Streets.

Remove all temporary sheeting driven in Stage I.

GENERAL NOTES:

Areas shown shaded are to be removed - see specific demolition notes.

Stone abutments, walls, and piers that support girders shall not be removed within 2 ft. ± of the girder bearings.

Unless otherwise specified building foundations, building walls, etc shall be removed to 3 ft. below existing or proposed grades. Any walls, foundations, etc. within and below the proposed footing areas shall be removed to a minimum of 2 ft. below the bottom of footing elevation and backfilled with "Structure Embankment".

Demolition limits for the stone abutments, decks, piers, walls, etc. are shown on the existing bridge reference plans, sheets SR:1 THRU SR 12

THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE TRACK WORK TO BE DONE BY CONRAIL AND AT ALL TIMES, PROVIDE A CLEAR PATH TO ENABLE CONRAIL VEHICLES TO GET THRU THE JOBSITE.

Existing bridges will be closed to traffic until construction has been completed for Stage I. During Stage II constr. & Demo., Stage I (12th and Lafayette) will be open to traffic.

Demolition and construction notes indicate only the work required in each stage and is not intended as the required order that work is to be performed.

Splices, Steel Piles (12")	Each	120	67	187
Rock Drilling	L.F.	24	3	27

GENERAL NOTES

All piles shall be driven to a minimum bearing capacity of 60 tons AS DETERMINED BY ART. S.02.07 OF STD. SPECS.

Steel H piles shall be HP 12x53

Piles shall be driven in accordance with M.D. O.T. Standard Specifications

Prebore all piles to Elev. 65.0. Voids around piles shall be backfilled by sluicing and/or jetting sand as required. Preboring and backfilling are incidental to piles. Preboring through rock or old concrete foundations will be paid for under "Rock Drilling".

The location of the D.E. Tunnel in Lafayette St. shall be verified in the field prior to driving piles.

Piles 50 and 65 shall be driven during Stage I in addition to piles 1 thru 36. Pile 65 shall be drilled through the old pier foundation. See Ref. Dwg. SR-11

Under Stage II, piles 40, 41, and 46 thru 48 shall be drilled through that portion of the old foundation to remain in place. Piles 41 and 47 may be adjusted laterally along the pile line, to avoid the 3'-6" x 4'-3" pier to remain in place. See Ref. Dwg. SR-2

TEST PILES WILL NOT BE REQUIRED ON THIS PROJECT.

PARTIAL METAL BULKHEAD FOR PIER CAP
CONSTRUCTION JOINT

Notes:

Partial Metal Bulkhead may be used as alternate construction joint at contractors expense.

Care is to be used in casting concrete around bulkhead to prevent dislocation or misalignment of the bulkhead.

Notch Metal Strip to fit around reinforcing steel.

CONCRETE QUANTITIES GRADE 35S Cu. Yds.

MISCELLANEOUS QUANTITIES

Item	Unit	12TH ST.	LAFAYETTE ST.	Total
Unclassified Foundation Exc.	C.Y.	580	285	865
Low Temperature Prot. Sub Str.	C.Y.	578.8	295.1	874
SUBSTRUCTURE CONC.	C.Y.	578.8	295.1	874

GENERAL NOTES

N.F., F.F., and E.F. denotes near face, far face and each face respectively

For bevel and molding details see sht. S-137

For H Pile spacing and details, etc. see sht. S-118

Maximum average foundation pressure D.L. only = 3500 lbs/sq. ft.
Maximum foundation pressure D.L. and L.L. = 5000 lbs/sq. ft. Pier #2 only.

Removal of portions of existing substructure and sewer within the foundation excavation limits and between ground elevation and bottom of proposed excavation is included in the quantity of Unclassified Foundation Excavation. Removal of all other portions of the existing structure is included in the item "Removal of Portions of Structures."

Adjust reinforcing steel to miss anchor bolts. Drilling holes for anchor bolts will not be permitted.

GENERAL NOTES:

DESIGN: MICHIGAN DEPT. OF STATE HIGHWAYS SPECIFICATIONS FOR DESIGN OF HIGHWAY BRIDGES - 1958 EDITION AND CURRENT AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES (HS 25-44 LOADING). LL DEFL. LIMITS - L/800 & L/300 (CANT)

FABRICATION: MICHIGAN DEPARTMENT OF STATE HIGHWAYS AND TRANSPORTATION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION - 1970 EDITION.

FIELD CONNECTIONS: FIELD CONNECTIONS SHALL BE BOLTED WITH ¾" HIGH STRENGTH BOLTS (EXCEPT AS NOTED).

CAMBER: BEAMS ARE TO HAVE A PARABOLIC CAMBER WITH ORDINATES AS SHOWN ON THE CAMBER DIAGRAM. ALLOWABLE CAMBER TOLERANCE SHALL BE ± 1/4" (AT CENTER). HEATING IS TO BE USED, IF NECESSARY, TO ASSURE CAMBER PERMANENCY WITHIN THE ABOVE TOLERANCE.

ANCHOR BOLTS: ANCHOR BOLT LENGTHS SHOWN ARE MINIMUM. BOLTS LONGER THAN THOSE SHOWN MAY BE FURNISHED AT NO ADDITIONAL COST.

STRUCTURAL STEEL: STRUCTURAL STEEL SHALL CONFORM TO ASTM A-572 (GRADE 50) EXCEPT THAT STEEL FOR GALVANIZED PORTIONS OF BEARINGS MAY BE ASTM A-36.

WELDS: THE MINIMUM SIZE OF WELDS IS TO BE ¼" UNLESS OTHERWISE SHOWN ON THE PLANS. WELDING OF STUDS IS INCIDENTAL TO "SHEAR DEVELOPERS".

PAINTING: THE STRUCTURAL STEEL SHALL BE PAINTED. PAINTING SHALL BE IN ACCORDANCE WITH THE SUPPLEMENTAL SPECIFICATION FOR PAINTING NEW STRUCTURAL STEEL.

BOLTS: HIGH STRENGTH STEEL BOLTS, NUTS, AND WASHERS SHALL CONFORM TO ASTM A-325, TYPE 1.

PINS: PINS SHALL MEET THE REQUIREMENTS OF ASTM A 668, CLASS F AND BE CHROME PLATED WITH A MINIMUM THICKNESS OF 3 MILS (.003 IN.)

CHARPY TEST: A 572 STEEL SHALL MEET THE CHARPY V-NOTCH IMPACT REQUIREMENTS AS SHOWN FOR A 588 IN ARTICLE 8.06.04 OF THE STANDARD SPECIFICATIONS (15 FT-LBS @ 40° F)

BEARINGS: ALL PORTIONS OF BEARINGS NOT WELDED TO THE BEAMS SHALL BE GALVANIZED AND TOP COATED IN CONFORMANCE WITH THE SUPPLEMENTAL SPECIFICATION FOR PAINTING NEW STRUCTURAL STEEL.

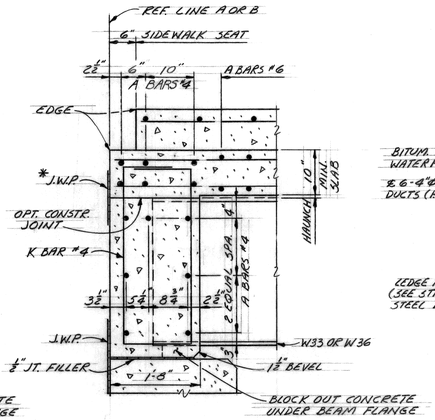
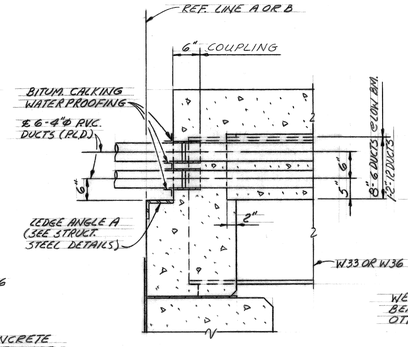
*J.W.P. AT OPTIONAL CONSTR. JOINTS IS INCIDENTAL TO CONCRETE 45 D.

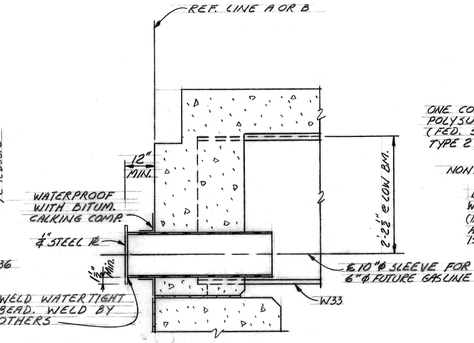
SECTION A-A



SECTION B-B

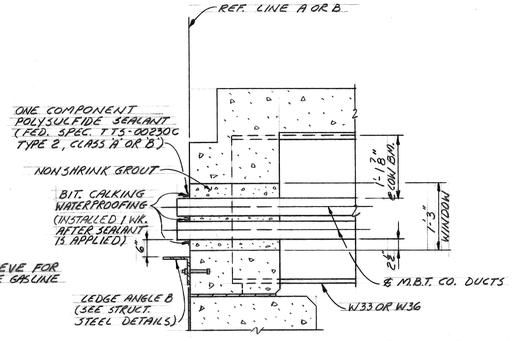


SECTION C-C



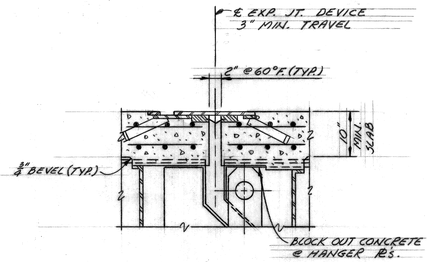
SLEEVE TO BE FURNISHED AS SHOWN BY MICH. CON. GAS. CO. AND INSTALLED BY CONTRACTOR. WATERPROOFING INCIDENTAL TO 10" Ø PIPE SLEEVE - PLACED.

SECTION D-D

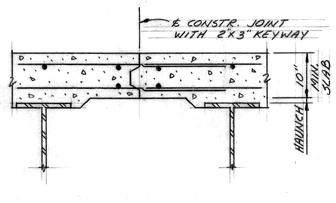


NOTE: CONDUITS, SPACERS, SEALANT AND GROUT FURNISHED AND INSTALLED BY M.B.T. CO.

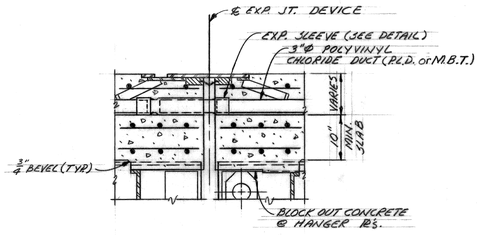
SECTION E-E



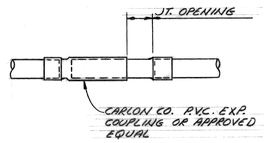
SECTION THRU SLAB AT EXP. JT.



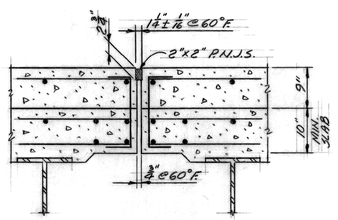
SECTION THRU SLAB AT LONG. CONST. JT.



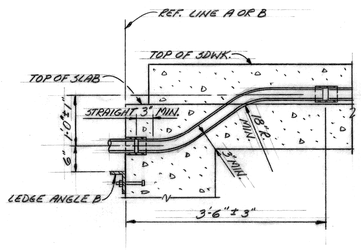
M.B.T. & P.L.D. CONDUIT DETAIL AT EXP. JT.



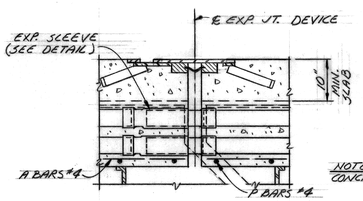
EXPANSION SLEEVE DETAIL



SECTION THRU MEDIAN AT LONG. EXP. JT.



P.L.D & M.B.T. CONDUIT DETAIL AT BACKWALL



NOTE: BLOCK OUT CONCRETE @ HANGER RS.

P.L.D. CONDUITS AT EXP. JT.

GENERAL NOTES:

J.W.P. DENOTES JOINT WATERPROOFING.
P.L.D. DENOTES PUBLIC LIGHTING DEPARTMENT.
T DENOTES TOP OF SLAB. B OR BOT. DENOTES BOTTOM OF SLAB.
N.F. DENOTES NEAR FACE.
F.F. DENOTES FAR FACE.
E.F. DENOTES EACH FACE.
EDGE OR GROOVE DENOTE EDGING OR GROOVING WITH AN APPROVED TOOL.

THE TOP MAT OF DECK REINFORCEMENT AND ALL THE MEDIAN AND SIDEWALK REINFORCEMENT SHALL BE EPOXY COATED IN ACCORDANCE WITH THE SUPPLEMENTAL SPECIFICATIONS.

IF THE OPTIONAL CONSTRUCTION JOINT IN THE BACKWALL IS USED, CAST THE LOWER PORTION OF THE BACKWALL PRIOR TO PLACING DECK REINFORCEMENT.

THE CONTRACTOR IS TO PROVIDE A SAWED JOINT ⅛ INCH DEEP X ⅜ INCH WIDE (MIN.) IN THE TOP OF THE SLAB OVER AND PARALLEL TO THE CENTERLINE OF THE PIERS. THE JOINT IS TO BE SAWED BEFORE CASTING OF SIDEWALKS AND MEDIANS AND IS TO BE FILLED WITH HOT POURED JOINT SEALANT. SAWING OF JOINT AND SEALANT ARE INCIDENTAL TO SUPERSTRUCTURE CONCRETE.

PROTECTIVE TREATMENT FOR BRIDGE DECKS IS TO BE APPLIED TO ALL SUPERSTRUCTURE CONCRETE SURFACES BETWEEN INSIDE FACES OF PARAPETS.

SIDEWALKS AND MEDIAN POURS SHALL NOT BE CAST UNTIL SLAB CONCRETE HAS ATTAINED AT LEAST 50% OF ITS DESIGN STRENGTH AS DETERMINED BY TABLE 7.01-4 OF THE STANDARD SPECIFICATIONS.

THE PARAPET SHALL BE GIVEN A RUBBED SURFACE FINISH ON THE VERTICAL AND TOP CONCRETE SURFACE

THE P.L.D. ENCASEMENT SHALL BE WITH STRUCTURAL LIGHTWEIGHT CONCRETE

CONCRETE QUANTITIES GRADE 45D (C.Y.)

NOTES:

JOINT TYPES

THE EXPANSION JOINT DEVICE SHALL BE OF A TYPE THAT INCLUDES A CONTINUOUS NEOPRENE SEAL ACROSS THE DECK. UNLESS OTHERWISE NOTED ON THE PLANS, THE CONTRACTOR HAS THE OPTION OF USING ANY OF THE DEVICES LISTED BELOW:

DEVICE	MANUFACTURER
ACME STRIP SEAL	ACME HIGHWAY PRODUCTS
ALU - STRIP	WATSON BOWMAN, INC.
ONFLEX	STRUCTURAL ACCESSORIES, INC.
PRO - SPAN	FEL - PRO INC.
UNIDAM	ROYSTON LABORATORIES, INC.
WABO - MAURER STRIP SEAL	WATSON BOWMAN, INC.
FEL-SPAN C.S.	FEL-PRO INC.

THE MODEL OF THE JOINT TYPE SELECTED SHALL BE SUITABLE TO ACCOMODATE THE TOTAL MOVEMENT NOTED ON THE PLANS.

COMPLETE WORKING DRAWINGS OF ALL DETAILS OF FABRICATION OF THE EXPANSION JOINT DEVICE SHALL BE SUBMITTED FOR REVIEW IN ACCORDANCE WITH STANDARD SPECIFICATION 1.05.02.

FABRICATION AND INSTALLATION

THE EXPANSION JOINT SHALL BE BENT IN THE SHOP TO CONFORM TO THE CONTOUR OF THE ROADWAY SLAB. IT SHALL BE INSTALLED IN ACCORANCE WITH MANUFACTURER'S RECOMMENDATIONS SUBJECT TO NOTES HEREIN AND THE APPROVAL OF THE ENGINEER.

WHERE THE DEVICE IS TO BE INSTALLED ON CAST CONCRETE, THE SURFACE LAITANCE SHALL BE REMOVED BY SANDBLASTING AND ANY VOIDS FILLED WITH EPOXY MORTAR PRIOR TO BEDDING.

WHERE THE SEALING GLAND IS LOCKED INTO A METAL EXTRUSION, A LUBRICANT-ADHESIVE CONFORMING TO STANDARD SPECIFICATION 8.16.04 - d-2 SHALL BE REQUIRED BETWEEN THE SEAL AND METAL EXTRUSION.

A SEALANT SHALL BE USED BETWEEN THE SEAT AND THE ANCHORED PORTION OF THE SEALING GLAND, AND ALSO BETWEEN THE SEAT AND HOLD DOWN DEVICE. THE SEALANT SHALL CONFORM TO FEDERAL SPECIFICATION MMMG-650b GRADE B, TT-S-00230C TYPE II, OR SHALL BE AN APPROVED EQUAL.

THE VOID FORMED BETWEEN THE VERTICAL EDGE OF THE HOLD DOWN DEVICE AND THE BLOCK OUT SHALL BE FILLED WITH A SEALANT IF LESS THAN ½ INCH IN WIDTH OR WITH AN EPOXY MORTAR IF GREATER THAN ½ INCH. THE SEALANT SHALL CONFORM TO FEDERAL SPECIFICATION TT-S-00230C TYPE II OR SHALL BE AN APPROVED FLEXIBLE EPOXY.

ALL BOLT CAVITIES IN THE HOLD DOWN DEVICES SHALL BE FILLED WITH AN EPOXY MORTAR IF THE CAVITIES ARE CONTINUOUS OR WITH AN APPROVED FLEXIBLE EPOXY IF THEY ARE NOT CONTINUOUS.

THE AREA OF THE HOLD DOWN DEVICE AND SEALING GLAND WHICH WILL BE IN CONTACT WITH A SEALANT SHALL BE CLEANED WITH TOLUENE OR OTHER APPROVED SOLVENT.

ALL SURFACES IN CONTACT WITH THE EPOXY MORTAR SHALL BE LIGHTLY SAND BLASTED AND PRIMED WITH THE BINDER PRIOR TO PLACING THE MORTAR.

THE EPOXY MORTAR SHALL CONFORM TO STANDARD SPECIFICATION 4.50.20.

THE PRO-SPAN DEVICE MUST INCORPORATE A CAST-IN-PLACE METAL SEAT.

DETAILS AT CURBS OR BARRIERS

THE DETAILS ON THIS SHEET SHOW AN APPROVED MEANS OF TERMINATING THE EXPANSION JOINT DEVICE AT CURBS OR BARRIERS. VARIATIONS OR ALTERNATIVE SCHEMES WILL BE CONSIDERED AND MAY BE USED IF APPROVED BY THE ENGINEER.

MATERIALS

THE COST OF ALL MATERIALS AND LABOR REQUIRED FOR PROPER INSTALLATION OF THE EXPANSION JOINT AND THE TERMINAL ASSEMBLIES AT THE CURBS, SIDEWALKS, OR BARRIERS IS INCLUDED IN THE PAYMENT FOR THE EXPANSION JOINT DEVICE.

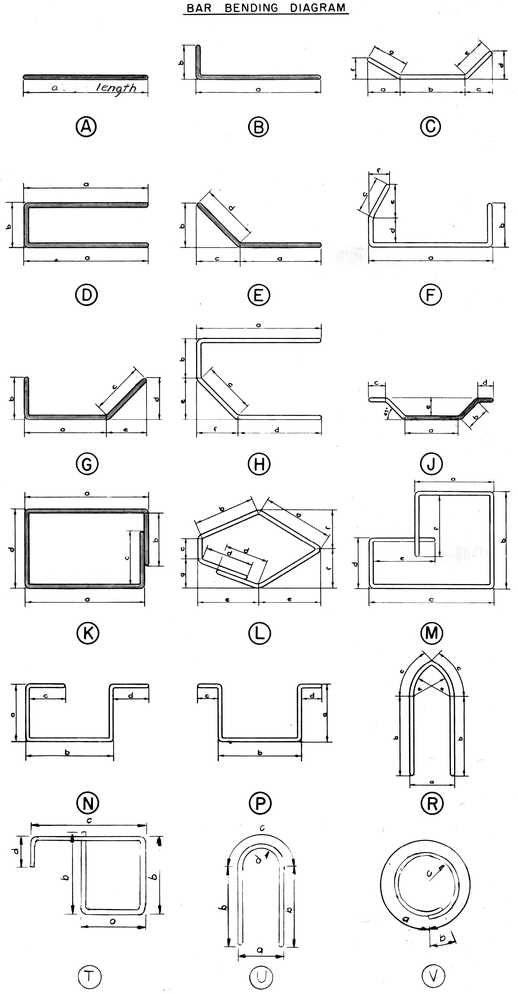
BAR BENDING DIAGRAM



NOTE: All bends in Reinforcing Steel to be made about a pin of the minimum diameter allowed by the Standard Specifications.

Tolerances in cutting and bending bars are as established in Manual of Standard Practice of the Concrete Reinforcing Steel Institute and Detailing Manual of the American Concrete Institute.

PAINTING:
As per Specifications and Notes on Design Drawings. Steel in contact with concrete shall not be painted at all.

GENERAL NOTES.

LIVE LOAD AND IMPACT.
As per Michigan State Highway Department Specifications for Highway Bridges, 1920 Edition, except:
Floorbeams and Girders:
Four Lines of 18 Ton Trucks on Roadway. The diaphragms were assumed to distribute the floorbeam loads by considering them continuous over two spans on either side of the floorbeam in question. An impact allowance of 18½% was added to the moment and shear on the floorbeams. No impact, however, was added on the Girders for a roadway loaded with four lines of trucks.
Stringers and Slab:
18 Ton Truck — 25% Impact.
Sidewalk: 100 #/□' — No Impact.
Columns: Four Lines of Trucks on roadway and 100 #/□' on sidewalks Impact: 25% on roadway only.
Foundations under Bent:
Same as for Columns except no impact.
MATERIALS, WORKMANSHIP AND TESTS:
As per Specifications and Design Drawings, Sheets 1 to 5.
Unit Stresses. Tension 16000 #/□" net sect.
Compr. 16000−70 l/r gross "
Shear 10000 #/□" gross "
Shop Rivets: 12000 #/□" shear 24000 #/□" bearing
Field " 10000 " " 20000 " "
Bearer on Masonry: 500 #/□'

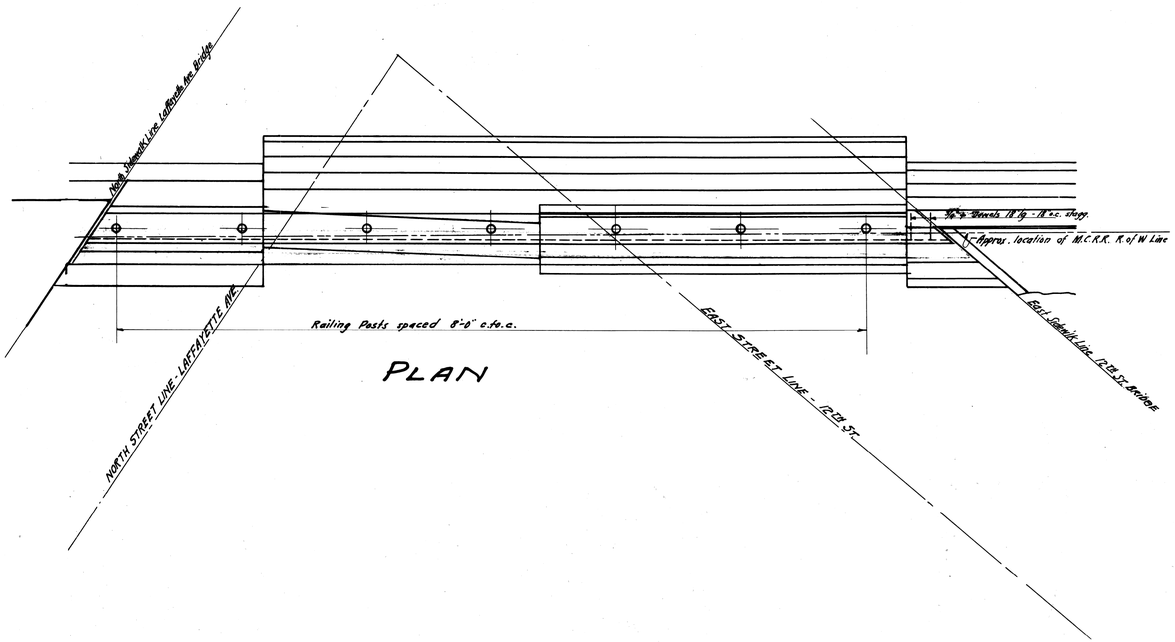
SECT. C-C.



PLAN

Mode of Procedure:

Excavate behind existing retaining wall from east end of 12th Street Bridge abutment to north end of Lafayette Avenue Bridge abutment in order to disclose the condition and dimensions of this wall as there is no data available from which to obtain this information.

The section of the new wall shall be as shown on "Typical Section A-A" except where intercepted by existing masonry as indicated in section B-B and C-C.

After the actual conditions are disclosed the Engineer will give further information as to the details of construction, etc. The face of the new wall shall follow closely the existing wall both in batter and alignment.
