criteria and engineering judgment.

Speed humps are designed to reduce vehicular speed on residential local streets that have a single travel lane in each direction.

What are the advantages of speed humps?

- Speed humps are an effective tool in reducing speeds.
- Most drivers will slow down to avoid jarring their vehicle or choose another route.

- Residential streets with a speed limit of 25 MPH
- Priority to streets adjacent to active schools and parks
- Daily traffic volumes between 200 - 4000 vehicles
- DPD records of speeding and vehicle crashes
- Street used as a known "cut through" for a major road
- Support of the residents on the block
