City of Detroit

OFFICE OF THE CITY CLERK

Andre P. Gilbert II
Deputy City Clerk

DEPARTMENT PETITION REFERENCE COMMUNICATION

To: The Department or Commission Listed Below

From: Janice M Winfrey, Detroit City Clerk

The following petition is herewith referred to you for report and recommendation to the City Council.

In accordance with that body's directive, kindly return the same with your report in duplicate within four (4) weeks.

Petition No.	2023-230
Name of Petitioner	Michigan Department of Transportation
Description of Petition	Petition to encroach within 14th Street, between Dalzelle Street and Marantette Street, to install an inductive charging segment for the proposed Electrified Public Roadway.
Type of Petition	**Alley Vacation/Encroachment/Utility Vacation:**
Submission Date	06/14/2023
Concerned Departments	Department of Public Works, Planning and Development Department, City Engineering Division
Petitioner Contact	Michigan Department of Transportation Represented by Next Energy 440 Burroughs Street Detroit, MI, 48202

Petitioner:
Michigan Department of Transportation
Represented by Next Energy
440 Burroughs Street
Detroit, MI, 48202

On behalf of the above-mentioned petitioner the Department of Public Works: City Engineering Division is submitting a petition request for the below mentioned action. The petitioner has received a project consultation from the Department of Public Works: City Engineering Division and has been advised the following:

Type of action recommended:

Petition to encroach within 14th Street, between Dalzelle Street and Marantette Street, to install an inductive charging segment for the proposed Electrified Public Roadway.

Jered Dean
Manager II
Department of Public Works
City Engineering Division
313-224-3985

The Michigan Department of Transportation (MDOT) Inductive Charging Pilot aims to explore the benefits of inductive charging technology for the use of electrified roadways. The Pilot is the first electrified public roadway in the U.S. The proposed two stretches of road are located in Detroit, Michigan: The location selection is currently being finalized and is proposed to be along two stretches of road in Detroit, Michigan: approximately a 0.25-mile segment on 14th Street and a 0.75-mile segment on Michigan Avenue.

The project team has identified a 0.25-mile segment on 14th street which allows for piloting of multiple use cases with multiple vehicle types and users. Stationary charging coils located between Michigan Avenue and the Book Depository, and Marantette Street will support additional charging in static mode. The project team is in discussions with the City of Detroit/Michigan Central/Ford to add an optional fourth dynamic system on 14th Street north of Dalzelle on one side of the street.

The Electreon vehicle charging system is based on inductive energy transfer, which means that energy is transmitted over air from the road infrastructure (copper coils under the road surface) to the vehicle receiver. There are three main hardware components in the system:

1. A management unit located at the side of the road (the 'brain'), which allows power to be transferred from the first coil (buried under the road surface) to the secondary coil inside a receiver pad that is installed under the vehicle chassis. It can be aboveground or underground where real estate is limited. The approximate size of the management unit is 5.5 feet by 3.2 feet with a height of 5.9 feet.
2. The roadway infrastructure consists of in-road copper coils that transfer power to the vehicles' receivers. The system is completely passive until there is an authenticated vehicle above the coil.
3. The vehicle receivers that transmit energy directly to the vehicle battery and engine.

The real-time management system (which includes cloud system meters) monitors and manages optimal EV charging at fleet scales, allowing for control oversight. During use, the management unit produces a maximum of 62 decibels during peak fan performance, which correlates to the sound of a car passing by or the ambient sound. When not in use, the management unit produces no sound. Approximately 36" of free space can be left around the management unit for continued access.

Initial use cases

Electrified Shuttle Vehicle

- An electrified shuttle will be deployed by Michigan Central to provide transportation within the community from the Bagley Mobility Hub to Michigan Central/Book Depository to businesses along Michigan Avenue between 14th Street and Rosa Parks Blvd.
    - The shuttle will operate during normal business hours
    - The shuttle will charge in dynamic mode while traveling north and south along 14th street between Marantette and Dalzelle, and in static mode when dropping off and picking up passengers at Michigan Central and the Book Depository

The shuttle will travel at posted speed which is between 25 and 35 mph along the route.

Additional use cases:

- 1st Mile/Last Mile Delivery
  - Electrified delivery vehicles will charge in dynamic and static modes for package delivery and pick up within Michigan Central and the Book Depository
  - Delivery fleet(s) will potentially also charge in static mode at terminal locations in Southeast Michigan

- Potential Future Use Cases:
  - Rideshare and carshare opportunities
  - Autonomous and/or additional electrified shuttles
  - Campus security and maintenance vehicles

Thank you for your time in reviewing these documents. Please contact us if you have any questions.

PROJECT SPECIFIC AGREEMENT
CITY OF DETROIT
TRUNKLINE PROJECT

DA

Control Section	GF19 63000
Job Number	213304EPE
Contract No.	23-5116

THIS PROJECT SPECIFIC AGREEMENT is made by and between the MICHIGAN DEPARTMENT OF TRANSPORTATION, hereinafter referred to as the "DEPARTMENT"; and the CITY OF DETROIT, a Michigan municipal corporation, hereinafter referred to as the "CITY"; for the purpose of fixing the rights and obligations of the parties in agreeing to construction improvements located within the corporate limits of the CITY.

WITNESSETH:

WHEREAS, the DEPARTMENT is planning to install inductive charging infrastructure under the roadway surface along 14th Street within the CITY'S right-of-way (ROW); and

WHEREAS, the parties hereto anticipate that payments by them or other sources will be sufficient to pay the cost of construction of that which is hereinafter referred to as the "PROJECT" and which is located and described as follows:

> Inductive charging infrastructure installation work along 14th Street from Bagley Street to Highway US-12 (Michigan Avenue) under the roadway surface, including electrical cabinet installation work; together with necessary related work, located within the corporate limits of the CITY; and

WHEREAS, the DEPARTMENT will be responsible for the entire cost of the PROJECT; and

WHEREAS, the parties hereto have reached an understanding with each other regarding the performance of the PROJECT work and desire to set forth this understanding in the form of a written agreement; and

WHEREAS, the DEPARTMENT and the CITY desire to set this mutual understanding regarding the PROJECT in the form of a written Project Specific Agreement.

NOW, THEREFORE, it is understood that:

1. The parties shall undertake and complete the PROJECT work in accordance with the Project Specific Agreement pursuant to MASTER AGREEMENT #03-5546 by and between the DEPARTMENT and the CITY. The CITY does hereby acknowledge its acceptance of the terms of MASTER AGREEMENT #03-5546 with respect to the PROJECT work under this Project Specific Agreement.

2. The DEPARTMENT will construct the PROJECT at no cost to the CITY.

3. The DEPARTMENT will administer all phases of the PROJECT and will cause to be performed all the PROJECT work. The DEPARTMENT will obtain a permit to perform the PROJECT work from the CITY prior starting installation.

4. Upon completion of the PROJECT, the DEPARTMENT shall own, operate and maintain the facilities in accordance with all applicable Federal and State laws and regulations. The CITY shall not restrict access to the PROJECT location for maintenance of the PROJECT. The DEPARTMENT will obtain necessary permits for maintenance work within the CITY'S ROW to notify the CITY of the proposed work.

5. The DEPARTMENT recognizes and acknowledges that private and/or public utility companies may require the modification of the DEPARTMENT'S facilities and it will cooperate with the utility when requested by the CITY. The DEPARTMENT will notify public and/or private utilities within the vicinity of the PROJECT prior to accessing the inductive charging system for maintenance or an emergency. The CITY shall not allow a private or public utility to cut through the inductive charging infrastructure.

6. This inductive charging infrastructure system constructed as the PROJECT shall be included in the review process for all future construction and permit projects in the area. The CITY shall not cut through the inductive charging infrastructure for any reason. The CITY shall not make any modifications to the facilities above or below the PROJECT without consulting the DEPARTMENT. Any removal or modification of the DEPARTMENT'S facilities, when necessary for CITY purposes, shall be performed by the DEPARTMENT or as authorized by the DEPARTMENT.

7. This Project Specific Agreement shall be executed by the duly authorized officials of the CITY and the DEPARTMENT.
