Application for Encroachment in Right of Way – City of Detroit

July 1, 2024

Historic Boston Edison Association is applying for an encroachment in the right of way to install a full-scale mock-up of proposed street sign posts for our neighborhood. We have spoken with the Traffic Engineering Division (TED) regarding this proposal and the City of Detroit standard for street signage within the city.

The intent of this encroachment and permit is to allow for the full-scale mock-up for final approval. Traffic Engineering staff are to be a part of the installation of this work.

The sign does differ from City of Detroit standards, we have reviewed the sign thickness and bracket attachments with TED staff as part of this proposal. Work to include removal of existing street signpost, salvaging of one-way and stop sign for re-installation. Direct burial posts in concrete within the right of way – using MUTC and City of Detroit specification for location. Cast aluminum base (decorative). Provide 84” clearance from grade to bottom of the lowest sign, as required. See attached drawings for the tentative approval of the “top” street sign with the addition of historic district marker.

Thank you.

Sincerely,

Kaleena Quinn

On behalf of – Historic Boston Edison Association
